

Name \_\_\_\_\_

## Notes and Examples

Math 6

### Long Division - Decimals

Period \_\_\_\_\_

Don't forget...DMSB.

**D**ivide into...?

**M**ultiply

**S**ubtract

**B**ring

*Ducks Must Swim Backwards  
Down*

Dividing Decimal Numbers.....

### COMPARE and CONTRAST

| What's the Same?  | What's Different?   |
|---|---|
| We follow the same _____.                                     | We need to make sure the _____ is whole. (x by 10's to move the point)  |
| We can _____ the answer to help us.                           | We need to move the decimal _____ straight up in the quotient.  |
| We need to be _____ with our work to avoid possible mistakes. | We need to _____ after the decimal point in the dividend until it...<br>→ _____<br>→ _____<br>or can be → _____ |

about these problems...  
... what are the answers?

$10 \div 5$      $100 \div 50$      $1000 \div 500$

You can multiply **BOTH** numbers in a division problem by \_\_\_\_\_ and still get the same answer!

## Notes and Examples

### Long Division - Decimals

---

Ex 1.

Is the divisor whole? Y / N ?

If so....multiply by tens to move both of the points

Then, move the point straight up from wherever it is.

Now, follow the normal steps for LONG DIVISION. Don't forget **D M S**

**B!**

Ex 2.

Is the divisor whole? Y / N ?

If so....multiply by tens to move both of the points

Then, move the point straight up from wherever it is.

$$4.68 \div 2$$

$$2 \overline{) 4.68}$$

$$4.85 \div 0.5$$

$$.5 \overline{) 4.85}$$

needs rounding

# Notes and Examples

## Long Division - Decimals

I needed to annex zeros. Y / N

I needed to annex zeros. Y / N

**Don't forget** to beware of "double bringdowns" when your divisor **DOES NOT** go into a number formed **after** you bring down. If this happens, put a zero in your quotient and either bring down the next number or annex a zero. Continue until the quotient terminates, repeats, or passes the place you are rounding to. (typically the thousandths)

Ex 5.

Is the divisor whole? Y / N ?

$$70.4 \div 6.6$$

Ex 6.

Is the divisor whole? Y / N ?

$$82.814 \div 2.4$$

This division problem...

Terminates / Repeats / Continues on...  
needs rounding

I needed to annex zeros. Y / N

I had a double bring down  
and needed to place a
